PROFILE

Full stack developer with 8+ years building end-to-end web products, the last five remote with US-based teams. I build AI-augmented development workflows — including an MCP server that lets Claude Code build and publish production features directly — on top of high-performance architectures for marketing SaaS platforms (edge computing, Web Components, Cloudflare Workers). Unlike most developers, I understand the business behind the product: funnels, conversion, attribution, and growth.

PROFESSIONAL EXPERIENCE

THIO · Senior Full Stack Engineer

Feb 2023 – Sep 2026

Austin, Texas, USA (remote)

AI-native marketing funnel platform (includes THIO-MARTECH, the team focused on martech development services for external clients).

- Led a team of developers migrating the rendering architecture from a monolithic Vue runtime to Web Components (Lit) served per page via Cloudflare Workers, achieving PageSpeed scores of 95+ on mobile and 100 on desktop consistently across all published pages.
- Redesigned the component editor for AI-assisted customization, with an MCP server that lets funnels be built and published from Claude Code on top of the same services the web chat uses; replaced rigid team-built themes with client-owned design, increasing client engagement with the platform and helping attract new clients.
- Implemented an edge manifest architecture (a JSON file served from Cloudflare) that eliminated redundant middleware on published pages, reducing unnecessary backend requests.
- Designed the multi-tenant platform (Laravel 12, PostgreSQL, React 19, Inertia), with a database per sub-account and a Platform / Agency / Sub-account hierarchy. Developed the shop module (variants, catalog, cart, checkout with Stripe) and the scheduling module (timezone-aware availability, double-booking protection).
- Built and maintained the v2 visual editor (Vue 3, TypeScript, Pinia, pnpm/Turborepo monorepo) with Astro SSG export and real-time concurrent editing locks (Socket.IO/Redis); established QA with ~1,200 tests (Pest/PHPUnit) and Playwright e2e specs.
- As part of THIO-MARTECH, led teams on external client projects: for Gigz (a platform connecting brands, fans, and venue owners to organize concerts), migrated a Laravel 6 monolith to Laravel 12 with a decoupled Vue CLI frontend; for hhdr, resolved duplicate-data triangulation in referral campaigns imported from Google Analytics.

Stack: Laravel, PHP, Vue 3, React, TypeScript, Astro, Lit, Node.js, Python, PostgreSQL, MySQL, Redis, Cloudflare Workers/KV/R2, Stripe, Playwright, MCP/Claude Code, Shopify/GoHighLevel

WebforceHQ · Full Stack Engineer

Jun 2021 – Feb 2023

Austin, Texas, USA (remote)

The group's original platform, the foundation THIO evolved from.

- Migrated the page editor from raw HTML construction to Blade (Laravel), laying the groundwork for a reusable component-runtime system — the architecture that later evolved into THIO.
- Designed and built the blog module: a simplified funnel type with posts rendered via TipTap, consumed directly by published pages.
- Designed and implemented a real-time editing lock service (Socket.IO and Redis) preventing two users from editing the same page at once — the foundation I later scaled in THIO's v2 editor.

Stack: PHP, Laravel, Vue, React, MySQL, Docker, Shopify, WordPress

Tangente México · Frontend Developer

May 2020 – Dec 2020

Saltillo, Coahuila (remote)

- Led the frontend migration from a Vue CDN script include to a proper Vue CLI build (.NET backend): the legacy frontend was barely interactive, so I rebuilt it to be fully interactive, improving UI/UX efficiency for clients.
- Launched Fondiux, an Uber-Eats-style marketplace for local restaurants and small eateries to manage orders and promote their products online.

Stack: Vue, Vuetify, Ionic, Bootstrap, .NET

Universidad Tecnológica de Parras de la Fuente · Systems Coordinator

Sep 2017 – Apr 2021

Parras, Coahuila

Combined role spanning development, server administration, and systems support.

- Built Vinculación, a system connecting universities, companies, and students: generated real-time resumes from students' academic records, solving companies' difficulty finding qualified candidates.
- Implemented Active Directory across the university's computers, migrating them to open-source OS images and eliminating the institution's prior use of pirated software.

Stack: PHP, Laravel, Vue, MySQL, Linux, Windows Server, Active Directory

PERSONAL PROJECTS

Stonks · Personal finance app (in development)

Centralizes expenses, bank savings, credit cards, and investment portfolio in one place, filling a gap existing finance apps don't cover.

- Built scheduled jobs that scrape Yahoo Finance and Google Finance for real-time and historical data on stocks, crypto, ETFs, and FIBRAs, avoiding the cost of paid financial APIs; in development, voice-based activity logging via Telegram/WhatsApp chatbots orchestrated with n8n.

Stack: Laravel, React Native, n8n

DashPhone · Phone dashcam app (completed)

Turns a phone into a dashcam, recording front and rear cameras simultaneously. Code complete and available in a repository; not yet published to app stores.

- Designed background loop recording with automatic storage management, and optimized battery consumption in multi-camera high-resolution recording with a reduced-resolution default (full-resolution option available to the user).

Stack: React Native

EDUCATION

B.S. in Information Technology

Sep 2018 – May 2020

Universidad Tecnológica de Parras de la Fuente

Associate Degree in Information and Communication Technology

Aug 2015 – Aug 2017

Universidad Tecnológica de Parras de la Fuente

Relevant courses: Claude Code (2025) · n8n (2025) · Professional Scrum (2025) · Python Fundamentals (2026)

LANGUAGES

Spanish (native) · English (intermediate, B1–B2)
